

## Load-house

Model ARLH

Load-house structure encompassing a complete loading bay that is installed on the outside of the building

## Features

The Model ARLH load-house can be easily added to an existing building. It is a great option for new-build in temperature-sensitive applications, or as an internal warehouse space-saving option. It is a flexible modular design that is installed quickly with no major civil work.

The Model ARLH load-house incorporates an all-steel base frame that accommodates the selected dock leveller. This base frame extends out to provide a pedestrian walkway on either side of the dock leveller. The base frame incorporates robust support legs with base plates that are fixed down to the concrete yard.

The raised concrete dock usually incorporates a cast-in channel frame. Also, the rear of the base frame and dock leveller is welded to it to secure the unit in position.

The load-house structure sits on top of, and is fixed to, the base frame. The all-steel constructed load-house has cladding sheeting rails that accommodate the selected cladding (insulated or uninsulated) on the sides and roof.

All closure flashings and rainwater goods are usually included.

## Model ARLH

## Options

- Available in an insulated or uninsulated version. Our insulated version is supplied with our standard insulated profiled cladding. Or we can provide Kingspan micro-rib at extra-over cost. All options are provided with a full range of colours.
- The load-house is usually secured at 90° to the building, but can be supplied at any required angle, for example, where yard space is an issue.
- Available in any length to suit the quoted swing or telescopic lip leveller.
- Available in any required height to suit any vehicle range, including taller double-deck vehicles.
- There are options to position base frame legs further apart to create a tail-lift void recess area under the dock leveller.
- The load-house can be designed to suit our full range of retractable dock shelters, inflatable dock shelters or cushion pads.
- The loading bay door can be installed at the front of the load-house or at the opening within the building.
- Our full range of accessories can be incorporated, including pod lighting, traffic lights, dock lights, wheel guides and Salvo safety system.

This is a standard ARMO product. We can also design and manufacture bespoke equipment that meets your specific needs.

Armo has been manufacturing high quality loading bay and lifting table solutions since 1972. For further technical or pricing information, please contact our head office:
